- **Who we are**

Building Tomorrow Today.

Synodus is derived from “Synergy”.

Let’s work together to achieve greater.

Synodus is the pioneering software development company in Blockchain, AI, IoT, and Big Data. If you’re looking for an end-to-end blockchain development partner, you’ve found the right one in Synodus. We provide blockchain development services across the spectrum from personal projects to large enterprise solutions that demand performance, security, scalability, and more. With a strong foundation in building Defi products, Metaverse/ gaming ecosystems and a wide range of enterprise blockchain d-apps from scratch, we’re confident that we can make you the next big thing in Web3.

- **Our mission & vision**

**Our Mission** is creating an environment where we can nurture aspiring human beings to become exceptional technology professionals. And in turn serve our global partners with the highest level of development, advice and service.

**Our Vision** is to deliver the most delightful products and services that help our users to a higher level of performance.

# • Our blockchain services

Blockchain Professional Services & Advisory

Non-Fungible Tokens (NFT) & Games Development

Cryptocurrency Wallet & Exchange Development

Decentralized Application (DApp) Development

ICO, IDO & STO

Smart Contract Development & Audit

## • Our capabilities

### Public blockchain

Ethereum  
Parity  
Tezos  
Stellar  
Tron  
Polkadot  
NXT  
Binance Smart Chain  
NEAR  
Cosmos

### Private blockchain

Corda  
OpenChain  
Stellar  
Monero

### Permissioned blockchain

Hyperledger Fabric  
Multichain  
EOS  
Ripple  
Quorum  
IBM Blockchain Platform  
Hyperledger Sawtooth  
Neo Blockchain Platform  
Hedera Hashgraph  
Hyperledger Iroha

Hyperledger Indy  
Exonum  
AKA Chain  
Oracle Autonomous  
Blockchain Cloud Service  
Azure Blockchain Workbench  
Amazon Managed Blockchain  
Google Cloud Platform

# • Our compliances

Trust is Earned Through Accreditations

SOC 2 Type I & Type II

ISO 27001

AML/KYC

AML/KYC

HIPAA

FISMA

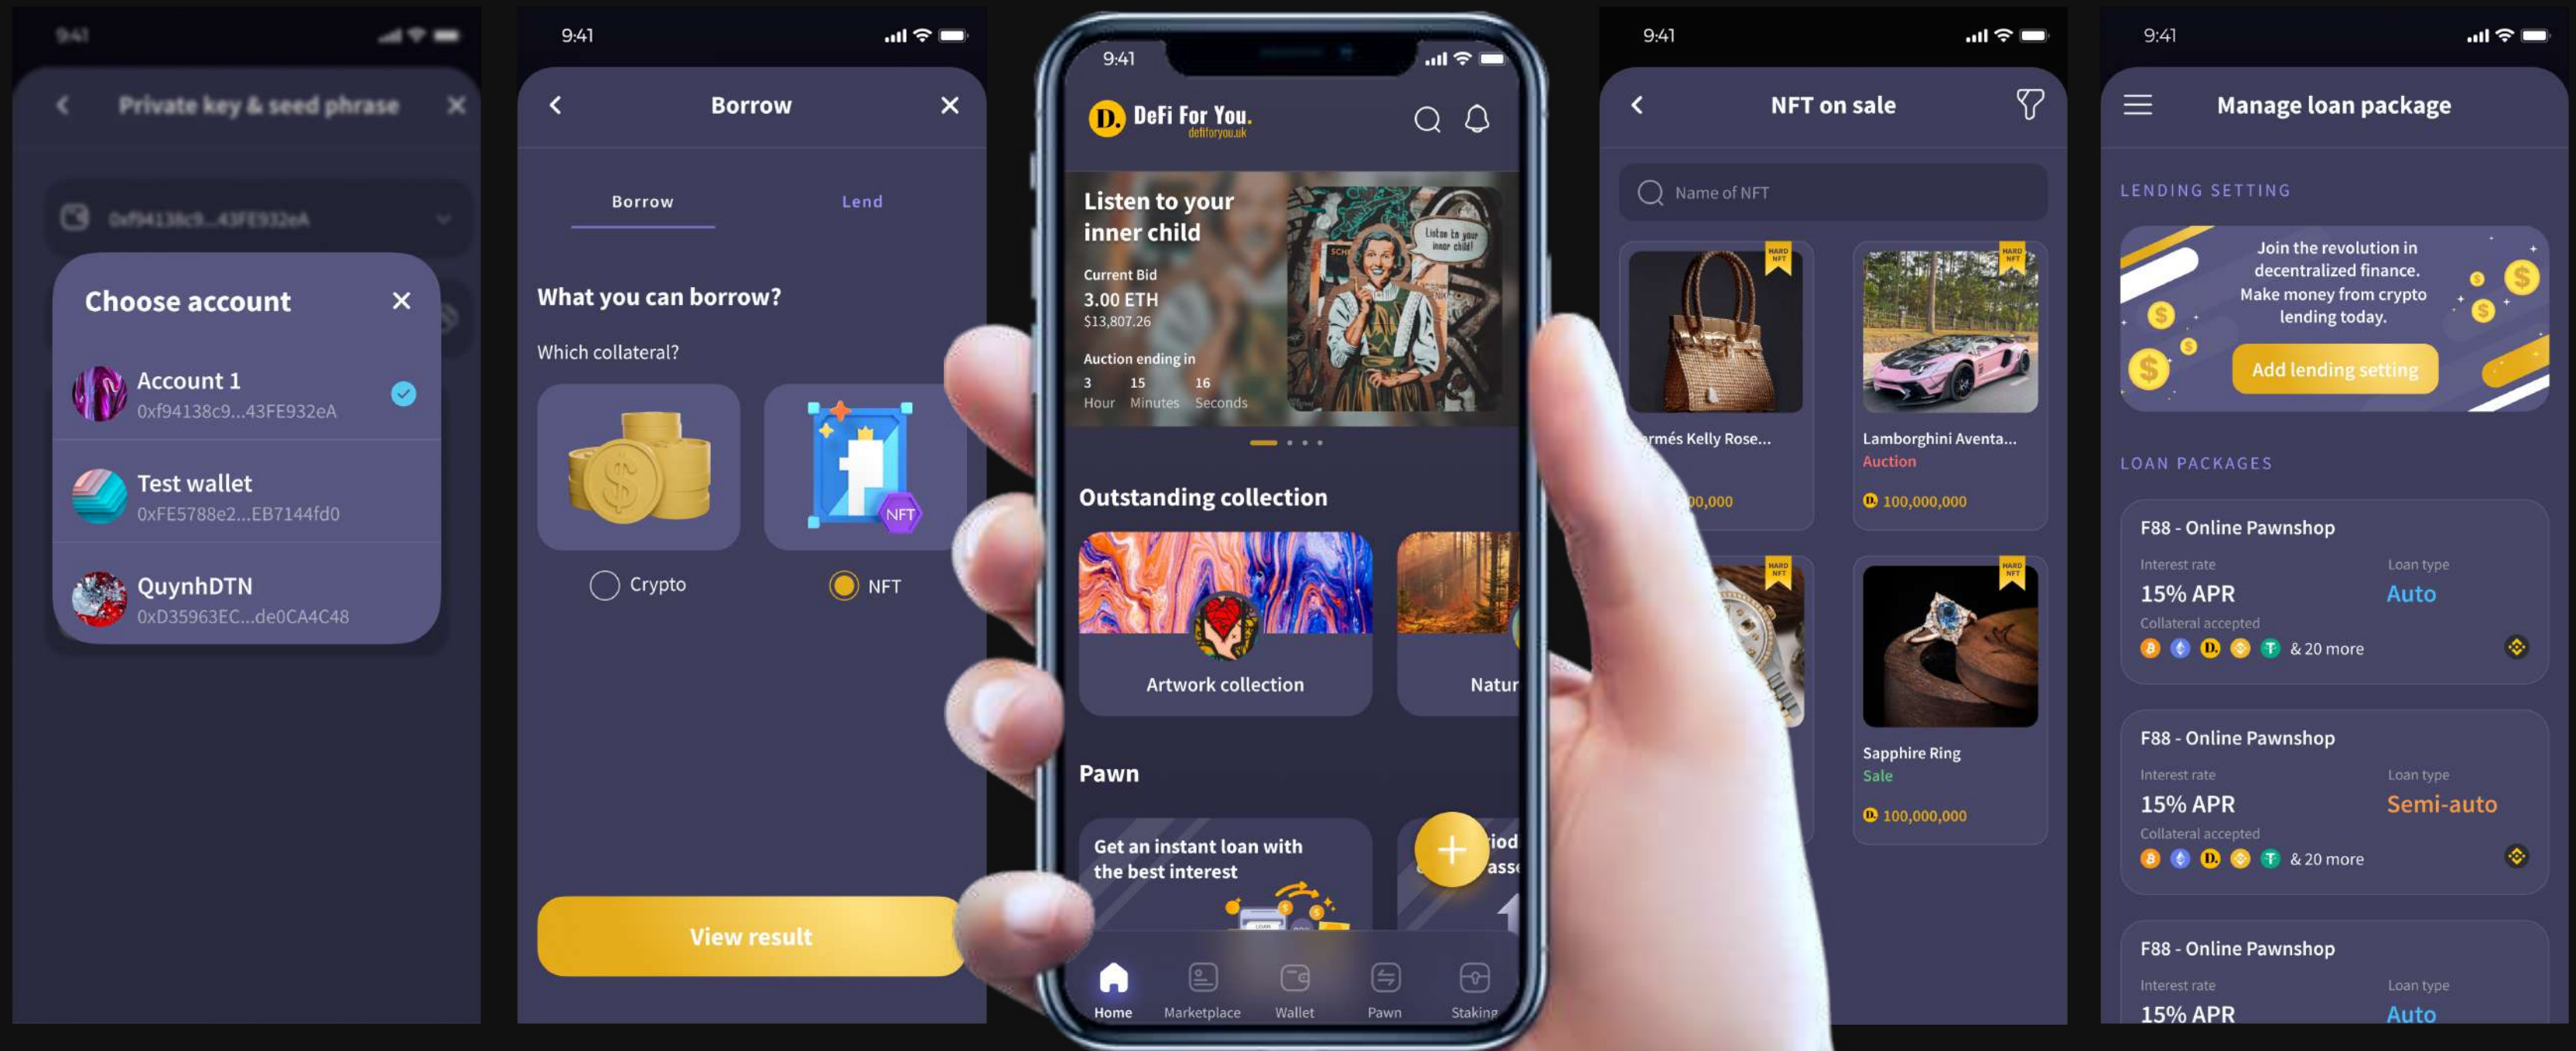

PCI DSS

PSD2

## What is Defi For You?

A peer-to-peer (P2P) lending platform to Finance Digital and Physical Assets without credit check requirements

### Peer-to-Peer Loans

Users borrow and lend amongst each other

---

### Lending from Liquidity Pool

Stake crypto and earn interest or borrow immediately at fixed interest rates

---

### Soft (Digital) NFT Market

Tokenize soft assets as NFTs to trade and borrow

---

### Hard (Physical) Asset NFT Market

Tokenize hard assets as NFTs and store them with ecosystem partners to receive crypto loans

## Scope of work

- 01** Issue traditional NFTs and Physical Asset-based NFTs
- 02** Facilitate NFT transactions & negotiations on the marketplace
- 03** Enforce repayment or penalty for late payment
- 04** Connect lenders with borrowers to issue crypto loans against digital or physical assets
- 05** Built-in crypto wallet for secure and seamless transactions
- 06** Integrated with third-party services, including gnosis safe - multisig wallet, moralis, chainlink, coingecko, and paicake
- 07** Certik audited & Certified

# Required technology

## Infrastructure

AWS, Kubernetes, Jenkins, GitLab, ASS, Prometheus

## Back-end

AWS, Kubernetes, Jenkins, GitLab, ASS, Prometheus

## Blockchain

Solidity, Binance Smart Chain, NodeJS, IPFS, Hardhat, Gnosis Safe Multisig, Moralis

## Mobile

Flutter

## Front-end

ReactJS, Typescript

## Challenge & Solution

### Challenge #1: Performance

The NFT platform must scale and execute smart contracts with speed and ease to accommodate fluctuations and growth in trading volumes

Solution: Developed in-house scan solutions from scratch to handle smart contract executions in batch

### Challenge #2: Automation

To ensure the security and validity of every transaction, automation is needed to generate transactions and process loan contracts & repayments on the blockchain

Solution: Implemented AWS KMS with encryption mechanism to store and encrypt Private key to verify the validity of actions on the smart contract

- Our Portfolio

## What is Cyberium?

A Metaverse World with 7 cities featuring its own esports game

### Unparalleled Gaming Experience

Users seamlessly switch between games by walking through the metaverse

### In-Game Marketplace

Buy, sell, and auction NFTs using \$BREAK for skins, cues, gacha boxes, crafting items, custom materials, and more

## Scope of work

- 01** Hosting entertaining E-Sports games across locations
- 02** Facilitating NFT transactions & negotiations on the marketplace
- 03** Collecting market fees for the listing of each successful sale

- 04** Connect lenders with borrowers to issue crypto loans against digital or physical assets
- 05** Verifying wallet balance to participate in the marketplace
- 06** Organizing mystery box sale events with in-game NFTs for personal consumption or direct trading

## Required technology

### Front-end

ReactJS, Typescript

### Back-end

PostgreSQL, MongoDB, Java  
Spring Boot, Spring WebFlux,  
Piñata, Redis, Kafka

### Blockchain

Solidity, Binance Smart Chain,  
NodeJS, IPFS, Hardhat, Gnosis  
Safe Multisig, Moralis

### Infrastructure

AWS, Kubernetes, Jenkins,  
GitLab, ASS, Prometheus

## Challenge & Solution

During the development stage, we had to cope with challenges regarding performance, consistency and security. Our team of competent developers strived to overcome the challenges with the following solutions.

**Gacha events require huge amounts of data being submitted and processed**

**Solution:** Developed an in-house solution from scratch to handle data submission in batch and failback solution to retry and send alerts

**Gacha boxes when opened must contain the same data as it was initially setup with accurate permissions as dictated by the owner**

**Solution:** Verify access to Gacha boxes by matching users' unique signature on smart contracts with transactional data and storing both the original and unboxing data hash

**The management of centralized activity related to in-game tokens must be verified and validated to ensure accurate deposits, transactions, and withdrawals**

**Solution:** Token deposits and withdrawals are managed using smart contracts with withdrawal requests being validated against the transaction. In-game activities involving tokens will be logged as a virtual transaction for traceability purposes

- **Our Portfolio**

## What is Realchainz?

An integrated, blockchain - Empowered real estate investment platform

STO & Launchpad for Real Estate Properties

---

Investment Marketplace between Investors & Real Estate Owners

---

Democratized Real Estate Investments

## Scope of work

- 01** Design Project's Tokenomics
- 02** Convert Real Estate into Liquid Assets
- 03** Convert Real Estate Tokens to NFT for Proof of Ownership
- 04** Stake Real Estate Tokens for Interest
- 05** Hold NFT and Generate Revenue from Property Operations
- 06** Developers Receive Funds to Develop Projects
- 07** Develop Digital Asset Exchange to enhance secondary market liquidity

## Required technology

### Front-end

ReactJS, Typescript

### Back-end

PostgreSQL, MongoDB, Java  
Spring Boot, Spring WebFlux,  
Piñata, Redis, Kafka

### Blockchain

Solidity, Binance Smart Chain,  
NodeJS, IPFS, Hardhat, Gnosis  
Safe Multisig, Moralis

### Infrastructure

AWS, Kubernetes, Jenkins,  
GitLab, ASS, Prometheus

## • Our Pricing

### OUTSOURCING MODELS

#### Fixed Cost Project

Best suited for projects with a clear scope

#### Time + Materials

Best suited for projects with a clear scope

#### Dedicated Team

Best suited for projects with on-going requirements

### FLEXIBLE PRICING

#### Deferred Payment

Pay half the cost of development upfront and pay us the rest only when the project has generated value for you

#### Equity Payment

Pay for the cost of development at a significant discount and we'll take the rest in percentage of the project or equity in the company

# • Our Development Process
